Turf Master Enviroturf™

Turf Master Enviroturf™ is blended to improve turf quality on your toughest sites such as Parks, Sports Fields, Commercial Sites, Golf Course Roughs and Backyards of Home Lawns. This turf blend will thrive at cold high altitudes as well as the dry sunny conditions of the Rocky Mountain Plains, while providing high quality, durable playing surface that is important to your children's safety. Yet, it will still give you lower water and fertilizing costs!

Turf Master Enviroturf™ is a new drought tolerant turfgrass blend. It is a very dense, hardy blend of turf. Within the first 18 months of establishment, Turf Master Enviroturf™ can use 30%-40% less water than Kentucky Bluegrass. Turf Master Enviroturf™ has many great qualities. It contains endophytes which are the best natural way to ward off insects. It is very deep rooting, which makes it a more drought tolerance plant. Turf Master Enviroturf™ thrives in sun or shade, making it adaptable for every situation. This lower maintenance turf uses 50% less nitrogen than Kentucky Bluegrass, which means less fertilizing. It is a very durable turfgrass which is ideal for areas of high traffic and wear.

- **Deep rooting and contains endophytes**
- **Thrives in sun or shade**
- **Uses less nitrogen than Bluegrass**
- **Extremely durable**
- **Uses 40% less water than Bluegrass**

Turf Master Enviroturf™ Performance Chart

Turf Master Enviroturf™ is an extra durable and drought tolerant turf that will help us conserve our natural resources and still provides a high quality groundcover.

Turf Master Enviroturf™

MAINTENANCE

WATERING:

- **WEEK 1:** It is critical to water new turf the first 7 days. New sod requires 2" or more of water per day for the first 7 days. Total amount should be split up over 4 or 5 watering periods each day.
- The warmer the temperature (over 90°) the more water you need to apply!
- **WEEK 2:** After the first 7 days, water at the rate of 2" per day for 7 days, split up over 2 to 3 watering periods per day.
- **WEEK 3:** If watering restrictions allow, water 1-2" per day every other day for 7 days. After the first two or three weeks, revert to watering 2 times per week as local watering restrictions allow.
- **WEEK 4** through first season: Water as needed with hose and hand sprinkler. Do not allow drying the first year. Turf is not fully established until after the first season!

Sandy soil requires more frequent watering than clay soil. Special attention should be paid to slopes and mounds where runoff occurs. More frequent, shorter watering may be necessary in such locations.

FERTILIZATION: Apply Turfmaster high phosphorous fertilizer at time of installation to promote root production. Follow up with Turfmaster blended fertilizers 2 to 3 times per year. Light green is an indication that your lawn needs fertilizer.

MOWING: Mow 10 days to 2 weeks after installation. Mow to a height of 2 to 3½ inches. Turf Master Enviroturf™ should be mowed about once a week. Never mow more than one-third of the blade at one time, as it may injure the plant.

DISEASES & INSECTS: Turf Master Enviroturf™ is highly resistant to common disease and insect problems. The endophytes in the crown produces toxins that kill or repel insects that feed on turf. The appearance of brown spots may be a result of a watering problem. If brown spots remain after adjusting your watering routine, a disease may be present.

Improved Drought Tolerance:

A deep, extensive root system allows Turf Master Enviroturf™ to display excellent drought tolerance.

TECHNICAL DATA

COMMON NAME: Fescues and other drought-tolerant grasses

SPECIES: Hybrid Fescue

GROWTH RATE: Summer: 1 to 1½" per week

ROOT DEPTH: 3 to 6 feet, depending upon soil type and watering patterns and soil preparation.

ADAPTABILITY

SOILS RANGE: Very good tolerance to saline soil conditions. Amendments are recommended for heavy clay soils to promote drainage.

SHADE TOLERANCE: Prefers full sun, but adapts to 60% shade.

GEOGRAPHIC RANGE: Rocky Mountain Region.

STANDARDS AND MEASURES

State inspected and certified for noxious weeds, diseases and insects.

SIZE:

- 10 sq. ft. per roll. Each roll is 2 ft. by 5 ft.
- Soil thickness ½" to 1½" top growth
- 500 sq. ft. per pallet

BIG ROLLS:

- 200 to 350 sq. ft.

WEIGHT: 2,000 to 2,800 lbs. per pallet

Grown from 100% Weed Free Seed - 98% Purity
